

# EAGLE Single

Circular ceiling diffuser with nozzles for supply air

## QUICK FACTS

- Adjustable nozzles, 360°
- 100% flexible spread pattern
- Can be used for vertical air diffusion
- Swirl function
- Substantial induction capacity
- Can be used with ALS commissioning box
- May be ordered in a galvanized version
- Standard colour White RAL 9003
  - 5 alternative standard colours
  - Other colours upon request

# Technical description

## Design

The supply air diffuser consists of a diffuser box and a removable diffuser face. The diffuser box has a connection nipple with a rubber seal ring. The diffuser face is equipped with aerodynamically shaped nozzles that are fully adjustable.

## Materials and surface treatment

The diffuser is manufactured in galvanized sheet steel and sheet steel. The whole unit is painted.

- Standard colour:
  - White semi-gloss, lustre 40, RAL 9003/NCS S 0500-N
- Alternative standard colours:
  - Silver gloss, lustre 80, RAL 9006
  - Grey aluminium gloss, lustre 80, RAL 9007
  - White semi-gloss, lustre 40, RAL 9010
  - Black semi-gloss, lustre 35, RAL 9005
  - Grey semi-gloss, lustre 30, RAL 7037
- Non-painted finish and other colours available on request.

The nozzles are made of plastic (PP-polypropylene).

## Accessories

### Commissioning box:

ALS is manufactured in galvanized sheet steel. It includes a removable commissioning damper, fixed measurement unit and acoustic lining with a reinforced surface layer, to Fire Resistance Class B-s1,d0 according to EN ISO 11925-2.

## Planning

The nozzles are rotatable through 360°. This makes it possible to achieve an infinite number of horizontal or vertical air diffusion combinations without altering the airflow, sound level or pressure drop.

## Installation

When freely suspended, the diffuser's inlet spigot is fastened to the connecting duct using blind rivets. When attached to a fixed ceiling, the diffuser is screwed into place through the top plate of the diffuser.

The diffuser face is removed by slackening the visible screws on the diffuser face. When the commissioning box ALS is used, the sleeve between the ALS and the diffuser can be extended using ordinary circular duct by up to 500 mm long without having to extend the measuring tube or the damper cords. See Figure 1.

## Commissioning with ALS

Commissioning must be carried out with the diffuser section in place. The measuring tubes and damper cords are pulled out of the diffuser through the nozzles. The damper setting can be locked. The K-factor is shown on the product label and is also indicated in the relevant k-factor guide which can be accessed at [www.swegon.com](http://www.swegon.com). See Figure 1.

## Maintenance

The diffuser can be cleaned when necessary using luke-warm water and detergent. The duct system can be accessed without the use of tools. The diffuser is removed by undoing the screws on the diffuser face. If the ALS commissioning box is used, the distribution plate is hinged aside and the damper unit twisted from its mounting with a simple hand movement. See Figure 1.

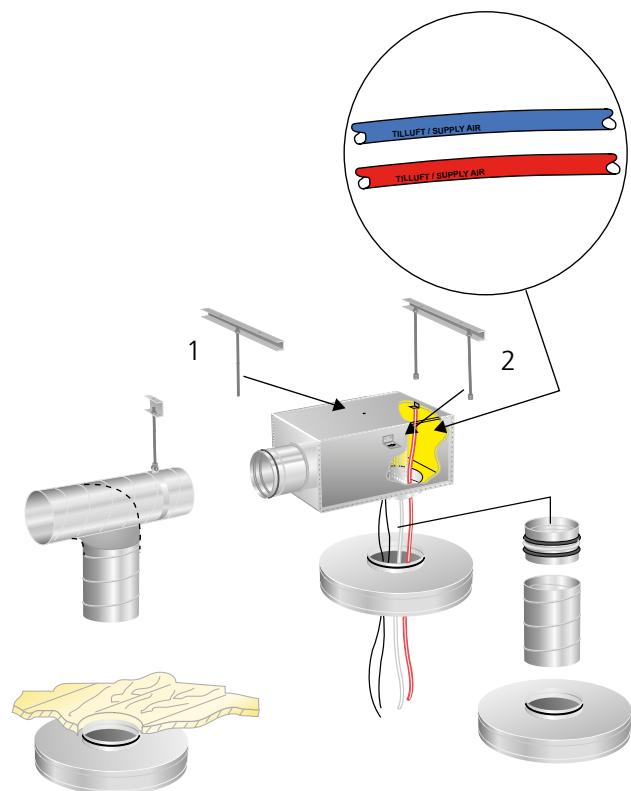

Figure 1. Installation. Commissioning.

## Sizing

- Sound pressure level dB(A) applies to rooms with 10 m<sup>2</sup> equivalent sound absorption area.
- Sound attenuation ( $\Delta L$ ) below is shown in the octave band. Orifice attenuation is included in the values.
- The throw  $l_{0,2}$  is measured under isothermal flow conditions.
- The maximum recommended under temperature is 14 K.
- For calculating the width of the air stream, air velocities in the occupied zone or sound levels in rooms with other dimensions, please refer to our web calculation softwares available for download at [www.swegon.com](http://www.swegon.com).
- All the technical data refers to a 360° spread pattern.

$L_w$  = Sound power level

$L_{p10A}$  = Sound pressure level dB (A)

$K_{ok}$  = Correction for producing the  $L_w$  value in the octave band

$L_w = L_{p10A} + K_{OK}$  gives the frequency divided octave band

### Throw lengths

The throw  $l_{0,2}$  is specified in the engineering graphs for standard nozzle settings, clockwise swirling air discharge. If a different setting is desirable, Table 1 can be used. See also Figure 4, Nozzle Settings, under Dimensions and Weights.

4-way	3-way	2-way	1-way
1.5	2.1	2.5	3.8

E.g. According to the graph, the EAGLE S has a throw of  $l_{0,2} = 2,3$  m

For 2M-way air diffusion  $l_{0,2} = 2,3 \times 2,5 = 5,75$  m

# Engineering graphs

## EAGLE S - Supply air

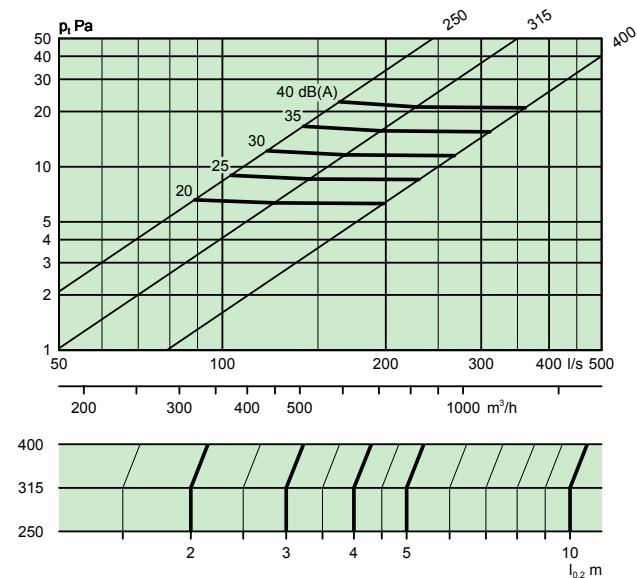

### Air flow - Pressure drop - Sound level - Throw

- The graphs must not be used for commissioning.
- The dB(A) values are for rooms with normal acoustic absorption of 4 dB.
- The dB(C) value is normally 6-9 dB higher than the dB(A) value.
- For other throw lengths, refer to table of throw lengths under Sizing.

**EAGLE S 125, 160, 200**

**EAGLE S 250, 315, 400**

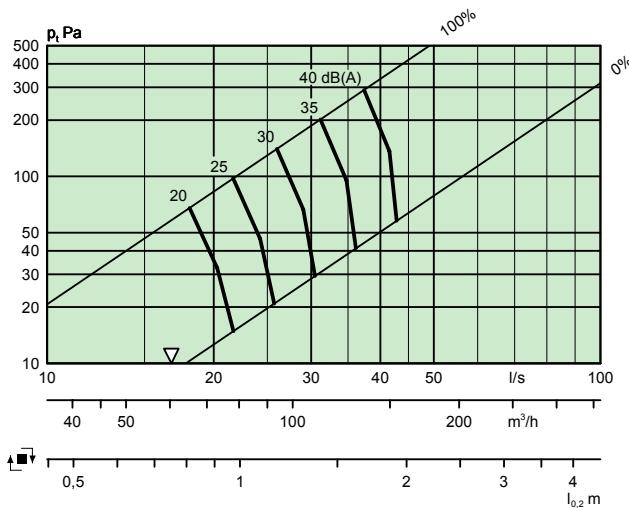

## Engineering graphs - EAGLE S with ALS - Supply air

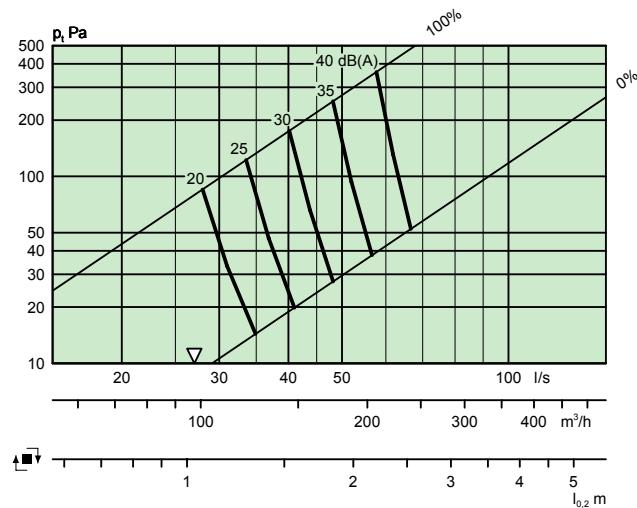

### Air flow - Pressure drop - Sound level - Throw

- The graphs must not be used for commissioning.
- $\nabla$  = min. airflow to obtain sufficient commissioning pressure.
- The dB(A) values are for rooms with normal acoustic absorption of 4 dB.
- The dB(C) value is normally 6-9 dB higher than the dB(A) value. For more accurate calculations.
- For other throw lengths, refer to table of throw lengths under Sizing.

# Specification example

Swegon's complete circular diffuser type EAGLE S for ceiling mounting with a type ALS commissioning box and with the following functions:

- 100% flexible spread pattern
- Individually adjustable nozzles (55 mm) in recyclable plastic
- Cleanable
- Powder-coated in white, RAL 9003/NCS S 0500-N
- Cleanable ALS commissioning box with removable adjustment damper, measuring method with low systematic error and lined inside with sound absorbing material covered with woven surface layer that prevents fibre migration
